# **AMERICAN FOULBROOD DISEASE AMERIKAANSE JONGBYSIEKTE**

**AFB**

## **Guidelines for managing beekeeping with this disease Riglyne vir die bestuur van byboerdery met hierdie siekte**

AFB has been diagnosed in the Western Cape during the first quarter of 2009. Based on what is known of this disease, the following guidelines are published to assist beekeepers in managing their hives to live and work WITH this disease. This disease is normally considered as untreatable. As a result it is only the symptoms, the management of bees, the spread and the effects that are discussed here.

---

AFB (hierdie afkorting sal deurgans gebruik word) is vir die eerste keer tydens die eerste kwartaal van 2009 in die Wes-Kaap gediagnoseer. Gebasseers op wat oor hierdie siekte bekend is, word die volgende riglyne gepubliseer ten einde byboere by te staan om hulle korwe te bestuur ten einde SAAM MET AFB te werk en te lewe. Hierdie siekte word beskou as onbehandelbaar. As gevolg hiervan is dit slegs die simptome, die bestuur van bye, die verspreiding en die gevolge wat hier bespreek word.

## CONTENT

This document consists mainly out of sets of tables that should assist beekeepers in making decisions.

The first set of tables will describe what is known about this disease.

The next sets of tables will assist beekeepers in evaluating each step regarding risks related to this disease and to assess, those recommended management adaptations for implementation.

## INHOUD

Hierdie dokument bestaan hoofsaaklik uit tabelle wat byboere sal kan aanwend ten einde besluite te neem.

Die eerste stel tabelle sal wat alles bekend is oor hierdie siekte beskryf.

Die volgende tabelle sal byboere help om met elke stap van hulle operasies elke risiko verbind met hierdie siekte te kan identifiseer en om die aanbevole bestuursaanpassings na te gaan vir implementering

<b>TERM</b>	<b>DEFINITIONS</b>
<b>ROBBING</b> *	BEEES WILL COLLECT IN VARIOUS WAYS ANYTHING CONTAINING SUGARS. WHEN THEY STEAL HONEY OR NECTAR OUT OF OTHER COLONIES IT IS CALLED ROBBING. ROBBING WILL RAPIDLY SPREAD AFB.
<b>DRIFTING</b> *	BEEES ARE NOT ALWAYS LOYAL TO THEIR OWN COLONIES OR MAY LOSE THEIR WAY WHEN HIVES ARE TRANSPORTED OR MOVED OR PLACED INCORRECTLY. THIS COULD RESULT IN BEEES ENDING UP IN COLONIES FROM WHERE THEY DID NOT ORIGINATE.
<b>CROSS CONTAMINATION</b> *	DISEASES MAY BE SPREAD BETWEEN TARGET ORGANISMS AS A RESULT OF MAN'S INTERFERENCE (CONTAMINATED ITEMS CAN SPREAD DISEASES). PATHOGENS CAN CONTAMINATE NEW TARGET ORGNISMS AS A RESULT.
<b>SHOOK SWARM</b>	ALL THE BEEES OUT OF A COLONY ARE SHAKEN OFF THE COMB AND OUT OF THE HIVE AND MADE TO ENTER A NEW OR RECONDITIONED AND STERILISED HIVE WITH NEW WAX FOUNDATION, TO RE-ESTABLISH ON THIS NEW EQUIPMENT.
<b>STERILISED</b>	EQUIPMENT IS STERILISED WHEN IT HAS UNDERGONE ONE OR MORE OF THE FOLLOWING AFTER BEING SCRAPED CLEAN <ul style="list-style-type: none"> <li>- TREATED IN SOME WAY AT MORE THAN 160 DEGREES C FOR MORE THAN 10 MINUTES SUCH AS WITH WAX DIPPING</li> <li>- RADIATION AT A RADIATION FACILITY</li> <li>- STEEPING IN SODIUM HYPOCHLORITE FOR INERT AND NON-ABSORBENT MATERIALS FOR NO LESS THAN 30 MINUTES</li> <li>- STEEPING IN CAUSTIC SODA (LYE)</li> </ul>

\* The three most serious methods of spreading of the disease between colonies

<b>TERM</b>	<b>DEFINISIES</b>
<b>ROWERY</b> *	BYE SAL OP VERSKILLENDE MANIERE ENIGIETS WAT SUIKERS BEVAT VERSAMEL. WANNEER BYE HEUNING OF NEKTAR UIT DIE KORWE VAN ANDER BYE STEEL WORD DIT ROWERY GENOEM. ROWERY SAL AFB VINNIG LAAT VERSPREI.
<b>DRYF</b> *	BYE IS NIE ALTYD LOJAAL AAN HULLE EIE KOLONIES NIE OF KAN HULLE WEG VERLOOR WANNEER KORWE VERVOER OF VERSKUIF WORD OF VERKEERDELIK UITGEPLAAS WORD. DIT KAN BETEKEN DAT BYE IN KORWE BELAND WAARVANDAAN HULLE NIE GEKOM HET NIE.
<b>KRUIS-BESMETTING</b> *	SIEKTES KAN TUSSEN TEIKENORGANISMES VERSPREI AS GEVOLG VAN DIE MENSE SE INVLOED (BESMETTE ITEMS KAN SIEKTES VERSPREI). SIEKTEVERSPREIDENDE ORGANISMES KAN AS GEVOLG HIERVAN ANDER TEIKEN ORGANISMES BESMET.
<b>AFSKUD SWERM</b>	AL DIE BYE WORD UIT 'N KORF EN VAN DIE RAME AFGESKUD EN TOEGELAAT OM 'N NUWE OF BEHANDELDE EN GESTERILISEERDE KORF MET NUWE WASVELLE TE BETREE TEN EINDE TE HERVESTIG.
<b>STERILISEER</b>	TOERUSTING IS GESTERILISEER WANNEER DIT – NADAT DIT SKOON GESKRAAP IS - EEN OF MEER VAN DIE VOLGENDE BEHANDELINGS ONDERGAAN HET <ul style="list-style-type: none"> <li>- OP EEN OF ANDER MANIER TEEN MEER AS 160 GRADE C VIR MEER AS 10 MINUTE BEHANDEL IS, SOOS MET WARM KERSWAS DOOP</li> <li>- BESTRAAL BY 'N BESTRALINGSAANLEG</li> <li>- GEWEEK IN 3% NATRIUM HIPOKLORIET VIR NIE MINDER AS 30 MINUTE – SLEGS GESKIK VIR NIE-ABSORBERENDE MATERIAAL.</li> <li>- GEWEEK IN BYTSODA</li> </ul>

\* Die drie ernstigste maniere waarop die siekte tussen kolonies versprei

<b>Name</b>	American Foulbrood Disease
<b>Organism</b>	Paenibacillus larvae larvae
<b>Lifestyle</b>	Rod shaped, anaerobic, spore forming gram-positive bacteria.
<b>Lifetime potential of spores</b>	> 65 years dormancy
<b>Resistance of spores against temperature</b>	Temperature to time ratio 100 degrees for 35 minutes 160 degrees for 10 minutes (as examples)
<b>Target organism</b>	Affects all juveniles of Apis. Specifically larvae are fed the spores, which germinate and affect the pupal stage of bees.
<b>Medication</b>	Antibiotics are able to eliminate only the live active bacteria. Spores remain unaffected. Antibiotic application is counter-productive and illegal in SA.

<b>Naam</b>	Amerikaanse Jongbysiekte
<b>Organisme</b>	Paenibacillus larvae larvae
<b>Lewensstyl</b>	Staf vormige, anaerobiese spoor vormende gram positiewe bakterium
<b>Leeftydspotensiaal van die spore</b>	> 65 jaar dormant
<b>Weerstand van spore teen temperatuur</b>	Temperatuur tot tyd verhouding 100 grade vir 35 minute 160 grade vir 10 minute (as voorbeelde)
<b>Teiken organisme</b>	Affekteer alle Apis jongby. Spesifiek word die spore aan larwes gevoer waar hulle ontkiem en die papiestadium van bye affekteer.
<b>Medikasie</b>	Antibiotika vernietig slegs die lewende aktiewe bakterië. Spore bly bestand. Atibotika aanwending is teen-produktief en onwettig in SA.

AFB DETECTABLE SYMPTOMS	<u>VISUAL</u>	OLFACTORY				
HOW to inspect	<ul style="list-style-type: none"> <li>- After opening a hive, using appropriate smoke and the correct tools and procedures, carefully remove a frame out of the hive, close to the centre of the brood nest of the colony.</li> <li>- Carefully remove most of the bees off the comb in the frame by shaking the frame, by bumping or using a bee brush or feather over the open beehive.</li> <li>- Do not move the frame away from over the open hive.</li> <li>- Place yourself with the most light falling from behind you and shining onto the face of the comb and look at the comb to examine it.</li> <li>- On completion, place the frame back into the open hive.</li> <li>- Evaluate as many frames as you need to – every comb containing brood.</li> <li>- Return the hive to its original status.</li> <li>- Take care not to destroy or damage bees.</li> </ul>					
In the brood comb, detect:	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr><td data-bbox="645 804 1402 842">Sunken cell cappings</td></tr> <tr><td data-bbox="645 842 1402 880">Dark cell cappings</td></tr> <tr><td data-bbox="645 880 1402 970">Cell cappings with irregular openings that look chewed away</td></tr> <tr><td data-bbox="645 970 1402 1008">Moist “oily” looking brood cell cappings</td></tr> </table>	Sunken cell cappings	Dark cell cappings	Cell cappings with irregular openings that look chewed away	Moist “oily” looking brood cell cappings	<p>The aroma of “sour beer” or “old socks” or “old boots” or “stale sweat” or “mustiness”</p>
Sunken cell cappings						
Dark cell cappings						
Cell cappings with irregular openings that look chewed away						
Moist “oily” looking brood cell cappings						
In uncapped brood cells, detect any of the following:	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr><td data-bbox="645 1024 1402 1114">Bee pupa has its tongue sticking up to the cell roof</td></tr> <tr><td data-bbox="645 1114 1402 1152">The pupa is chocolate brown in colour</td></tr> <tr><td data-bbox="645 1152 1402 1241">The pupa has dried to a hard – difficult to remove scale in the bottom of the cell.</td></tr> <tr><td data-bbox="645 1241 1402 1356">The pupa, if stirred with a small sick - such as a match – pulls out into an elastic rubber-like thread of between 3 mm and 30 mm</td></tr> </table>	Bee pupa has its tongue sticking up to the cell roof	The pupa is chocolate brown in colour	The pupa has dried to a hard – difficult to remove scale in the bottom of the cell.	The pupa, if stirred with a small sick - such as a match – pulls out into an elastic rubber-like thread of between 3 mm and 30 mm	
Bee pupa has its tongue sticking up to the cell roof						
The pupa is chocolate brown in colour						
The pupa has dried to a hard – difficult to remove scale in the bottom of the cell.						
The pupa, if stirred with a small sick - such as a match – pulls out into an elastic rubber-like thread of between 3 mm and 30 mm						

<b>AFB WAARNEEMBARE SIMPTOME</b>	<u><b>SIGBAAR</b></u>	<b>RUIKBAAR</b>				
HOE om te inspekteer	<ul style="list-style-type: none"> <li>- Na die korf oopgemaak is deur die toepaslike rook en prosedures en gereedskap aan te wend, haal versigtig 'n raam na aan die middel van die broeines van die kolonie uit die korf.</li> <li>- Verwyder die meeste bye van die koek in die raam versigtig deur die raam oor die oop korf te skud of te stamp of deur 'n byeborsel of veer te gebruik.</li> <li>- Moenie die raam van oor die oop korf wegbeweeg nie.</li> <li>- Plaas jouself met die meeste lig wat oor jou skouer kom en wat op die aansig van die koek skyn en kyk na die koek om dit te inspekteer.</li> <li>- Sodra jy klaar is, plaas die raam terug in die oop korf.</li> <li>- Evalueer so veel rame as wat nodig is – elke koek waarin daar jongby is.</li> <li>- Herstel die status van die korf na die oorspronklike.</li> <li>- Wees versigtig om nie bye te vernietig of te beskadig nie.</li> </ul>					
In die koek met jongby vind:	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 2px;">Versonke sel doppies</td> </tr> <tr> <td style="padding: 2px;">Donker kleurige sel doppies</td> </tr> <tr> <td style="padding: 2px;">Sel doppies wat weggekou is met onreëlmatige gate</td> </tr> <tr> <td style="padding: 2px;">Nat, "olie-agtige" sel doppies</td> </tr> </table>	Versonke sel doppies	Donker kleurige sel doppies	Sel doppies wat weggekou is met onreëlmatige gate	Nat, "olie-agtige" sel doppies	Die geur van "suur bier" of "ou sokkies" of "ou stewels" of "ou sweet" of "muwwerigheid".
Versonke sel doppies						
Donker kleurige sel doppies						
Sel doppies wat weggekou is met onreëlmatige gate						
Nat, "olie-agtige" sel doppies						
In ontseelde jonby selletjies vind enige van die volgende:	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 2px;">Bye papies met hulle tongetjies teen die bokant van die sel</td> </tr> <tr> <td style="padding: 2px;">Sjokolade-kleurige papies</td> </tr> <tr> <td style="padding: 2px;">Papies wat hard en taai geraak het en wat moeilik uit die selletjie kom</td> </tr> <tr> <td style="padding: 2px;">Papies wat, indien geroer met 'n stokkie - soos 'n vuurhoutjie – soos 'n rubber rekkie uittrek in 'n 3 mm to 30 mm draadjie</td> </tr> </table>	Bye papies met hulle tongetjies teen die bokant van die sel	Sjokolade-kleurige papies	Papies wat hard en taai geraak het en wat moeilik uit die selletjie kom	Papies wat, indien geroer met 'n stokkie - soos 'n vuurhoutjie – soos 'n rubber rekkie uittrek in 'n 3 mm to 30 mm draadjie	
Bye papies met hulle tongetjies teen die bokant van die sel						
Sjokolade-kleurige papies						
Papies wat hard en taai geraak het en wat moeilik uit die selletjie kom						
Papies wat, indien geroer met 'n stokkie - soos 'n vuurhoutjie – soos 'n rubber rekkie uittrek in 'n 3 mm to 30 mm draadjie						

## American Foulbrood Disease (AFB)

### AFB is a bacterial disease of honey bee brood:

- The first signs of AFB are usually chewed cell cappings, sometimes sunken and darkened.
- When the cell is uncapped, coffee (with milk) coloured larva/pupa can be seen slumped on the lower wall.
- Bees will sometimes uncap infected cells.
- Pupae may have their tongues stretched across the cell.
- Older larvae/pupae dry out and turn into black scales that are difficult to remove from the cell wall.

Very early infection

Diseased larva

Diseased pupa with tongue

Older, darker diseased pupa

To diagnose AFB, mix up the larva/pupa with a matchstick and withdraw it from the cell. If the material ropes out then it is AFB. The presence of the pupal tongue stretched across a cell also means it is AFB. Dry scales do not "rope out".

AFB "Ropiness" test

<b>WHAT TO DO IF YOU DETECT SYMPTOMS OF AFB IN A HIVE</b>					
	<b>HIVE</b>	<b>EQUIPMENT</b>	<b>SITE</b>	<b>WORKSHOP</b>	<b>LEGAL</b>
<b>IMMEDIATE</b>	Put the frame back in and the lid back on the hive, reduce all entrances and mark the hive with an unmistakable mark, noting the date	Sterilise your tools.	Mark and identify the site as a potential AFB spore source	Consider methods of hive body sterilisation  Gather information and advice from reputable sources	Contact the Department of Agriculture and the Plant Protection Research Institute to notify this disease
<b>URGENT</b>	Evaluate the potential of implementing the shook swarm method	Plan an own or contract sterilisation technique such as hot paraffin wax dipping for the beehive equipment	Inspect all further hives in the site for physical symptoms	Develop methods and procedures for containing the spread in all bees, specifically regarding <b>DRIFTING</b> <b>ROBBING</b> <b>EQUIPMENT</b> <b>SWAPPING</b>	
<b>High PRIORITY</b>	Consider taking such a swarm – sealed well into the hive and at night – to a central and isolated yard to continue with management	Sterilise all the equipment that was in contact with the colony	Inspect all hives in your operation	Determine the potential source (IN) of the contamination  Determine the potential spread (OUT) of the contamination	
<b>REGULAR</b>	Culling of comb – replace with new foundation - and immediate efficient rendering of old – contaminated – comb to produce wax	Repeated sterilisation of hive parts each time a colony is lost or removed from a hive	Random placing of <b>NON-LEAKNG</b> hives  Regular inspections	Management of containment and sterilisation techniques at all levels. Keep everything bee tight. Manage bees using the <a href="#">“Barrier method”</a>	

## WAT OM TE DOEN INDIEN AFB SIMPTOME IN 'N KORF ONTDEK WORD.

	KORF	TOE- RUSTING	STAAN- PLEK	WERKSWINKEL	REGS- PLIG
<b>ONMIDDELIK</b>	Pak die raam terug en sit die deksel op, vernou alle openinge en merk die korf onmiskenbaar – merk ook die datum	Steriliseer die korfgereedskap	Merk en identifiseer die staanplek as 'n moontlike bron van AFB spore	Besin oor korftoerusting sterilisasie metodes  Versamel inligting van betroubare bronne	Skakel die Departement Landbou en die Navorsings-instituut Plantbeskerming ten einde die siekte aan te meld
<b>DRINGEND</b>	Ontleed die moontlikheid van die afskud swerm metode	Bepal 'n eie of kontrak sterilisasie tegniek soos warm parafien was doop vir die korftoerusting	Inspekteer al die ander korwe in die staanplek vir simptome	Ontwikkel metodes en prosedures om die verspreiding in alle bye te keer. Spesifiek oor DRYF ROWERY TOERUSTING UITRUILING	
<b>Hoë PRIORITEIT</b>	Besin daaroor om die korf – goed verseël en in die aand - na 'n sentrale en geïsoleerde staanplek te vervoer vir verdere bestuur	Steriliseer alle toerusting wat met daardie swerm in aanraking was	Inspekteer alle korwe in die operasie	Bepaal die moontlike bron van die besmetting (IN)  Bepaal die moontlike verspreiding (UIT) van die besmetting	
<b>GEREELD</b>	Uitsny van koeke – vervang met nuwe wasvelle - en onmiddellike en doeltreffende uitsmelt van ou besmette koeke ten einde was te produseer	Herhaalde sterilisering van korftoerusting elke keer as bye uit 'n korf verlore raak of uitgeskud word.	Rond en bont plaas van HEEL korwe  Gereelde inspeksies	Bestuur van beperking en steriliserings tegnieke op alle vlakke. Hou alles bye dig. Bestuur korwe op die <a href="#">"Barrier metode"</a>
